

Security & Account Recovery Guide

1. Account Security Best Practices

Protect your account with a strong, unique password. Use passwords with 12+ characters combining uppercase, lowercase, numbers, and symbols. Enable two-factor authentication (2FA) for enhanced protection. Never reuse passwords across multiple services. Update passwords quarterly.

Two-Factor Authentication Setup:

1. Go to Settings → Security → Enable 2FA
2. Choose authentication method (SMS, email, or authenticator app)
3. Verify your phone number or email
4. Download and store backup codes securely
5. Test 2FA with fresh login to confirm setup

Session Management:

View active sessions in Settings → Sessions. Terminate sessions from unfamiliar devices immediately. Sessions auto-expire after 30 days of inactivity. For sensitive operations, force re-authentication. Enable login notifications to receive alerts for new sessions.

2. Account Recovery Options

If locked out, use recovery options to regain access. Multiple recovery methods ensure you're never permanently locked out. Set up recovery options before you need them. Update recovery options annually.

Recovery Methods:

Recovery Email: Secondary email address for account recovery. Change anytime in Settings.

Recovery Phone: Verified phone number to receive SMS codes. Keep number active and current.

Backup Codes: 10 unique codes generated during 2FA setup. Each code works once. Store safely offline.

Security Questions: Answer 2-3 questions you set. Choose questions only you can answer.

Account Recovery Process:

1. Click 'Can't access account' on login page
2. Enter registered email address
3. Verify identity using available method (email, SMS, security questions)
4. Set new password using secure reset link
5. Optionally enable 2FA again for extra security

3. Suspicious Activity & Account Compromise

Report suspicious activity immediately. Signs include unauthorized purchases, strange login locations, or changed account details. We investigate all reports within 4 hours and take corrective action. Never ignore suspicious emails claiming to be from us.

If Your Account is Compromised:

1. Change your password immediately using secure device
2. Enable 2FA if not already active
3. Review and update recovery options
4. Check sessions and terminate suspicious ones
5. Contact security@company.com with incident details
6. Review transaction/activity history

Data Privacy & Protection:

Your data is encrypted in transit and at rest using AES-256 encryption. We comply with GDPR, CCPA, and other privacy regulations. Data deletion is permanent within 30 days. Backups retained for 90 days then destroyed. Regular security audits conducted by third parties. Access logs available for review in Settings → Security Logs.

Emergency Support:

Account locked or compromised?
Email: security@company.com (Monitored 24/7)
Phone: 1-800-SECURE-1
Response: Within 1 hour
Provide: Account email and recent transaction ID
